

Your Wellbeing Is Our Priority

As Community Learning Disability Nurses, we have a passion about helping people with Down Syndrome stay independent and live happy fulfilled lives for as long as possible.

People with Down Syndrome have a higher risk of developing Dementia, so our mission is to help make sure any changes are spotted early.

Early diagnosis means early treatment and maintaining a longer fulfilled life.

A baseline assessment for people with Down Syndrome from age 30 means we capture their full capabilities and can therefore use this to enable speedy diagnosis if things change in the future.

If this is something that could affect you or someone you support, then

Please contact us for a Baseline Memory Assessment
